Jetsukda Janthornthao  
AI Engineer @ Ztrus

# Class Overview

- What is Machine Learning (ML)
- Main types of Machine Learning
- Steps in a full ML project
- Machine Learning Framework
- Setup a Python Environment for Machine Learning

# What is Machine Learning (ML)

# 1. What is Machine Learning (ML)

# Spam Classification

- Email (text) as the input
  - Go into classification model
  - Output answer whether this is spam or not.

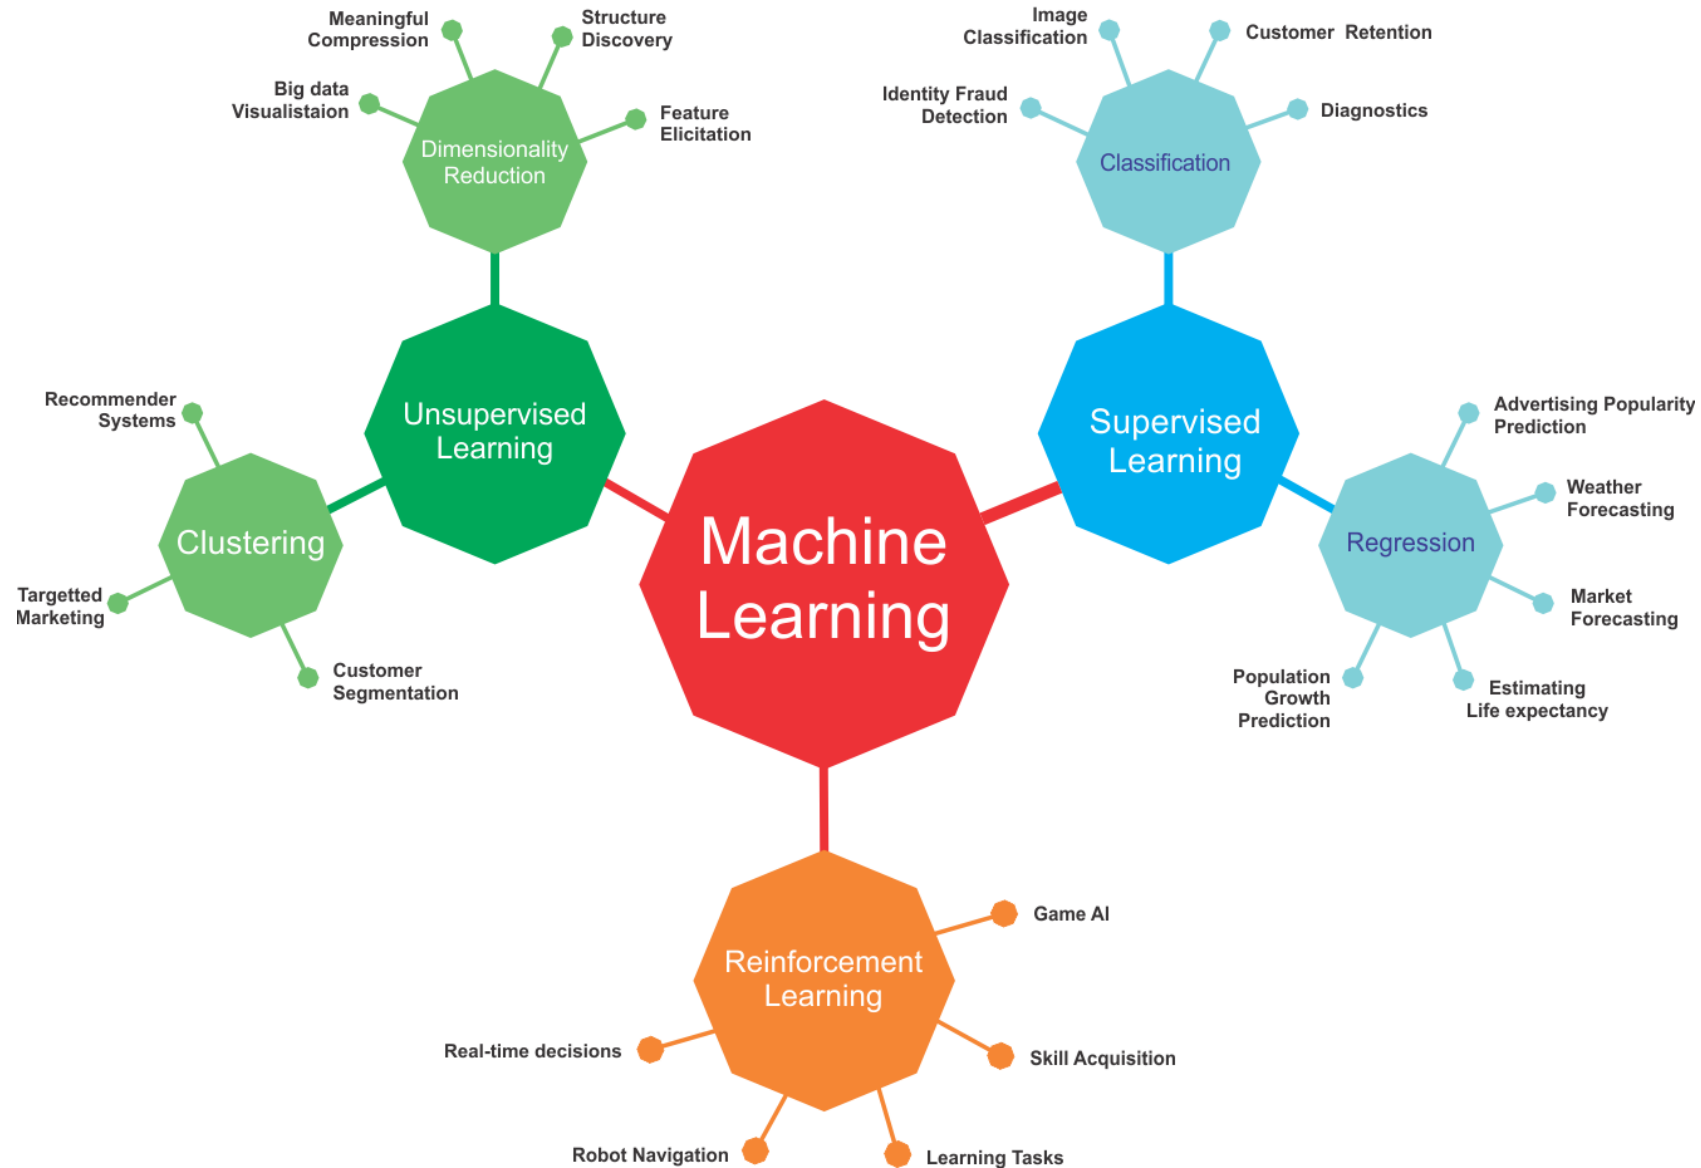

# Recommended system

- Recommender systems aim to **predict** users' **interests** and **recommend product** items that quite **likely** are **interesting** for them.

# Main types of Machine Learning

# 2. Main types of Machine Learning

# Terminology about ML

- Regression Problem
  - Predicting a continuous output (e.g. price, sales).
- Classification
  - Predicting a categorical output.
- Feature
  - With respect to a dataset, a feature represents an attribute and value combination.
- Label
  - In supervised learning, the "answer" or "result" portion of an example.

# Supervised Learning

the **training set** you feed to the algorithm includes the desired **solutions**, called **labels**

## Classification

categorical

## Regression

numerical

## Supervised Learning Algorithms

- k-Nearest Neighbors
- Linear Regression
- Logistic Regression
- Support Vector Machines (SVMs)
- Decision Trees and Random Forests

# Unsupervised Learning

Training a model to find patterns in a dataset, typically an **unlabeled** dataset.

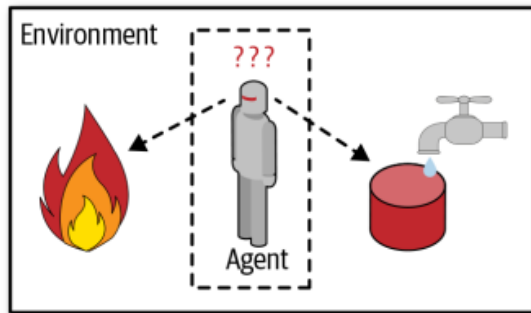

## *Unsupervised Learning Algorithms*

- Clustering
  - K-Means
- Dimensionality Reduction
  - Principal Component Analysis (PCA)
- Anomaly detection
  - One-class SVM

# Reinforcement Learning

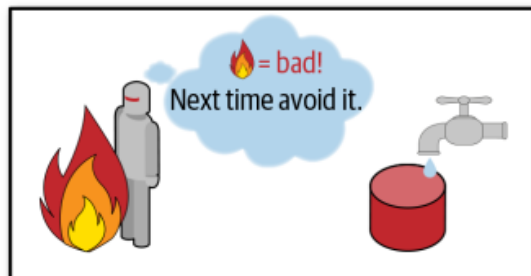

The learning system, called an **agent** in this context, can **observe** the **environment**, select and perform **actions**, and **get rewards** in return

- 1 Observe
- 2 Select action using policy

- 3 Action!
- 4 Get reward or penalty

- 5 Update policy (learning step)
- 6 Iterate until an optimal policy is found

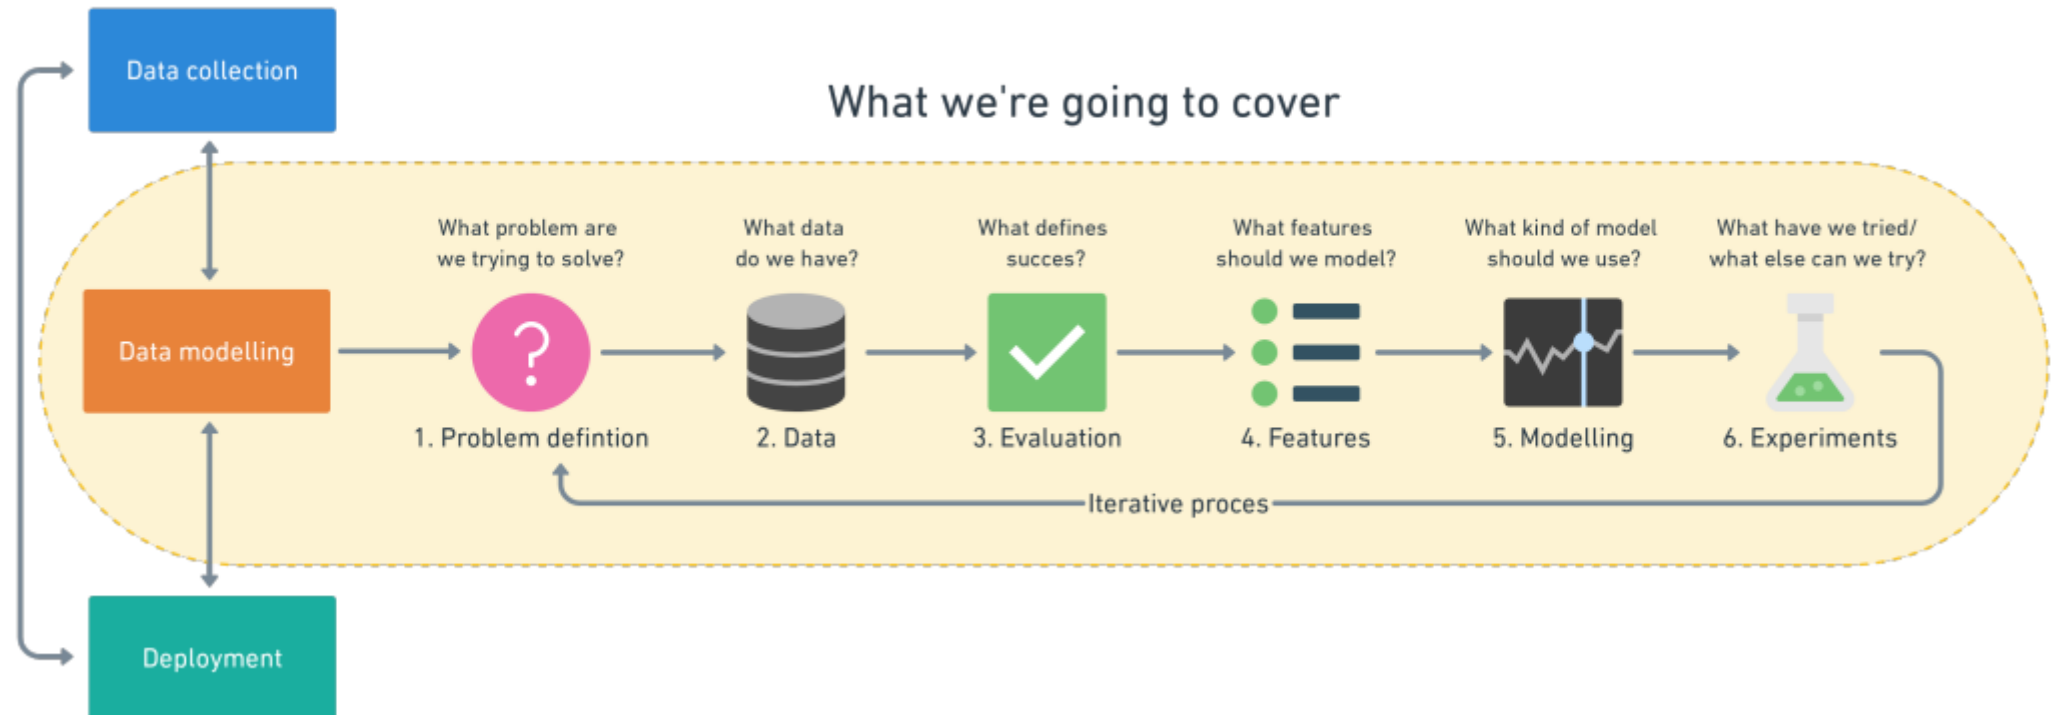

## *Reinforcement Learning Algorithms*

- Monte Carlo
- Q-learning

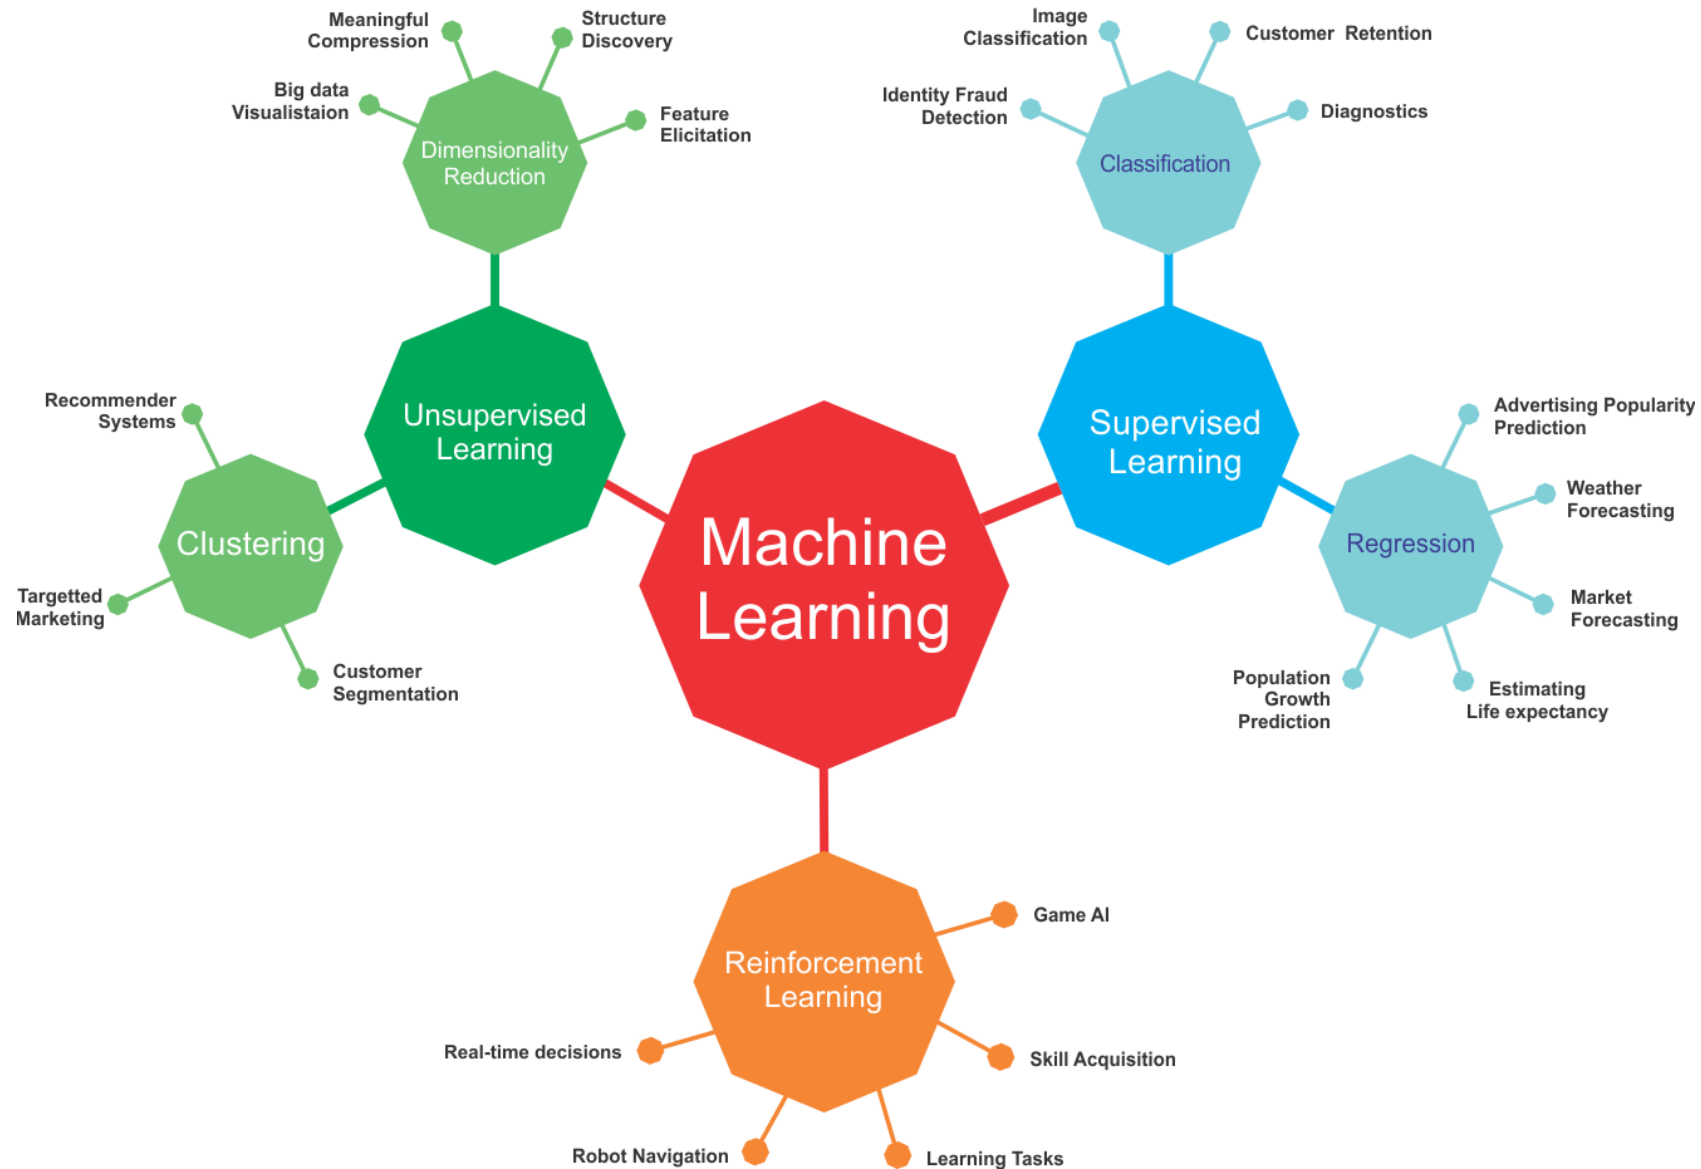

# Steps in a full ML project

# 3. Steps in a full ML project

Steps in a full machine learning project

# 3.1 Problem definition

# Supervised Learning

## *Classification*

- Binary classification
  - Email spam detection (spam or not).
  - Churn prediction (churn or not).
- Multi-class classification
  - classify a set of images of fruits which may be oranges, apples, or pears.

# Supervised Learning

## *Regression*

- Predicting whether stock price of a company will increase tomorrow ?
- How much will this house sell for ?
- How many people will buy this app ?

# Unsupervised Learning: Clustering

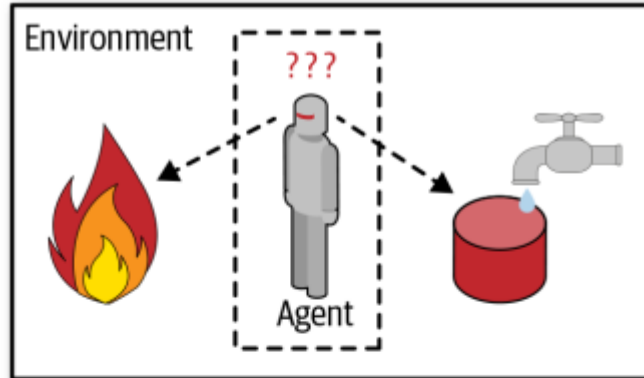

sample

Cluster/group

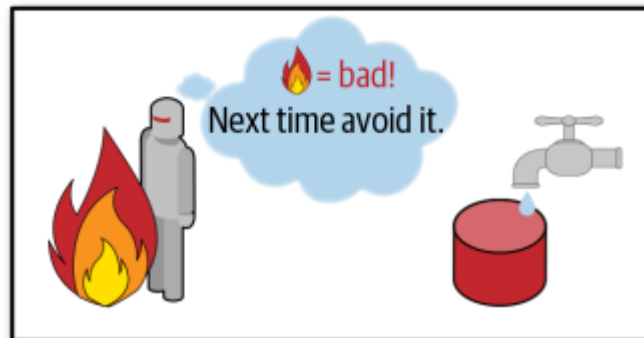

# Reinforcement Learning

- 1 Observe
- 2 Select action using policy

- 3 Action!
- 4 Get reward or penalty

- 5 Update policy (learning step)
- 6 Iterate until an optimal policy is found

## 3.2 Data

What kind of data do we have ?

# Different types of data

Rows

Columns

ID	Weight	Sex	Blood Pressure	Chest pain	Heart disease?
4328	110kg	M	120/80	4	Yes
5681	64kg	F	130/90	1	No
7911	81kg	M	130/80	0	No

Table 1.0: Patient records

**Structured**

From: [daniel@mrdbourne.com](mailto:daniel@mrdbourne.com)  
Hey Daniel,

First of all, thank you for being so amazing.  
This machine learning course is incredible.  
Thank you for keeping it simple!

**Unstructured**

## 3.3 Evaluation

What defines success for us?

# Different types of metrics

Classification	Regression	Recommendation
Accuracy	Mean absolute error (MAE)	Precision at K
Precision	Mean squared error (MSE)	
Recall	Root mean squared error (RMSE)	

## 3.4 Features

What do we already know about the data?

# Different features of data

Country	GDP per capita (USD)	Life satisfaction
Hungary	12,240	4.9
Korea	27,195	5.8
France	37,675	6.5
Australia	50,962	7.3
United States	55,805	7.2

Categorical features

Numerical features

# Different features of data

## 3.5 Modelling

Based on our problem and data, what model should we use?

# 3 parts to modelling

**1. Choosing and training a model**

or

**2. Tuning a model**

**3. Model comparison**

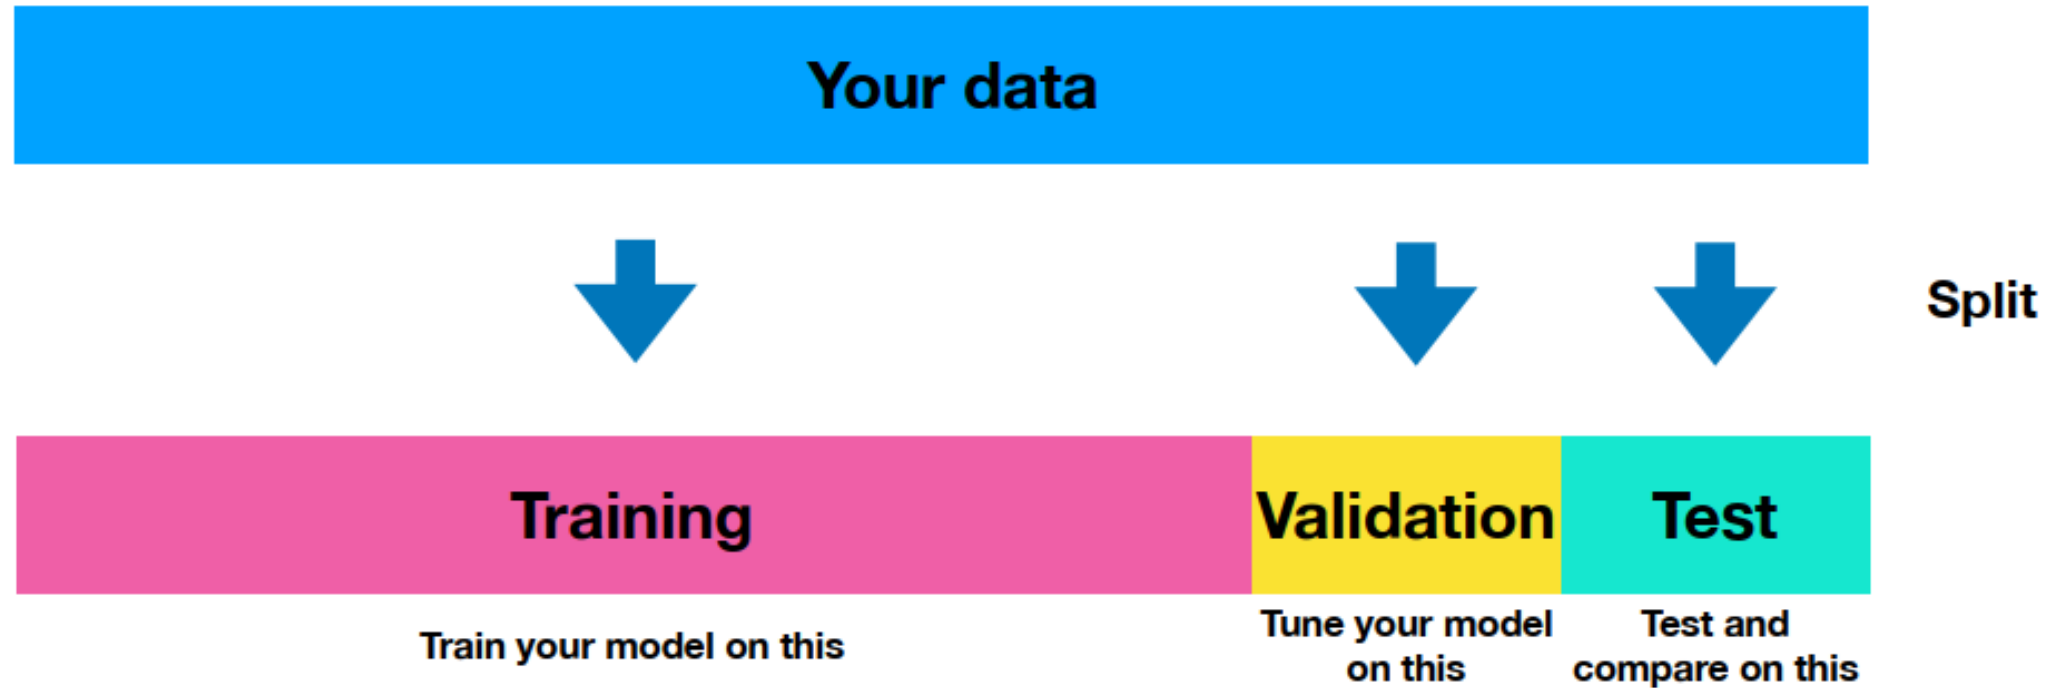

vs.

vs.

# The most important concept in ML

# The most important concept in ML

# The most important concept in ML

# Choosing a model

Problem 1

Model 1

## Structured Data

CatBoost

dmlc  
**XGBoost**

Random Forest

Problem 2

Model 2

## Unstructured Data

Deep Learning

Transfer Learning

# Tuning a model

**Random Forest**

**Neural Networks**

# Testing a model

Data Set	Performance
----------	-------------

Training 98%

Test 96%

Underfitting (potential)	Data Set	Performance
	Training	64%
	Test	47%

Overfitting (potential)	Data Set	Performance
	Training	93%
	Test	99%

# Overfitting and underfitting

**Underfitting**

**Balanced**  
(Goldilocks zone)

**Overfitting**

# Fixes for overfitting and underfitting

**Underfitting**

- Try a more advanced model
- Increase model hyperparameters
- Reduce amount of features
- Train longer

**Overfitting**

- Collect more data
- Try a less advanced model

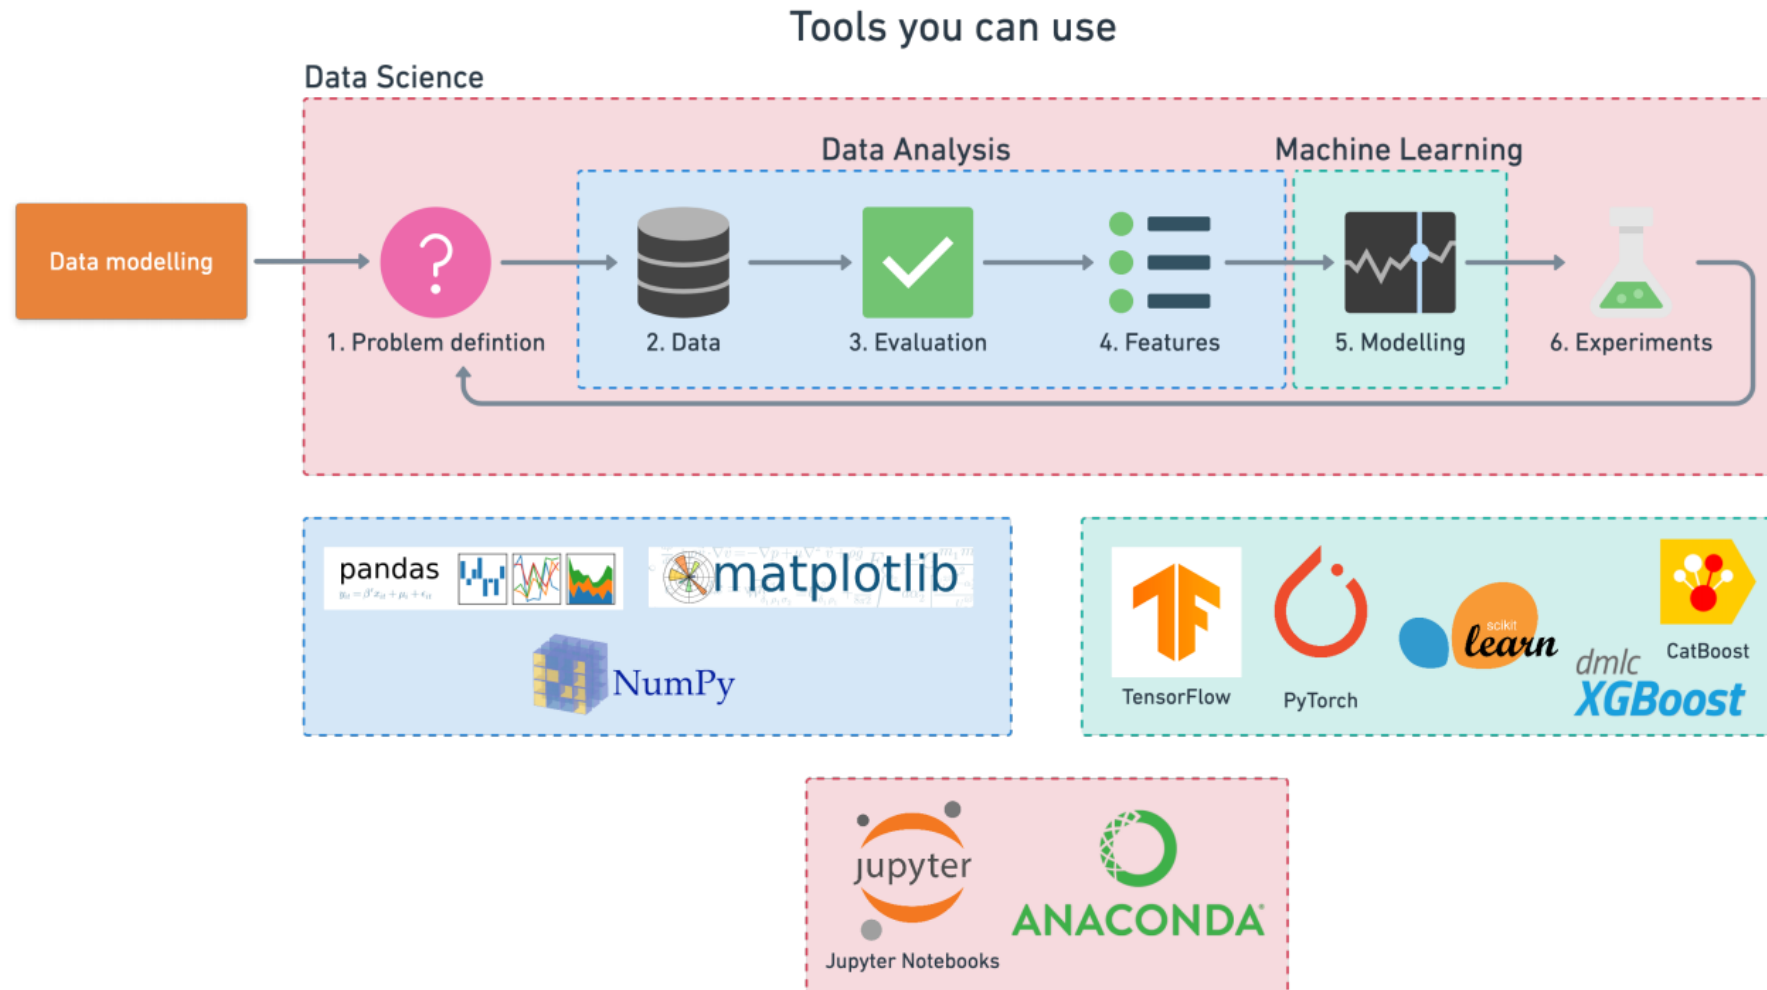

## 3.6 Experiments

### Experiment

				Accuracy	Training time	Prediction time
1		→  →		→ 87.5%	3 min	0.5 sec
	Inputs	Model 1	Outputs			
2		→  →		→ 91.3%	92 min	1 sec
	Inputs	Model 2	Outputs			
3		→  →		→ 94.7%	176 min	4 sec
	Inputs	Model 3	Outputs
